

Sorting algorithm

Compare 4, 2, 3, 1

Scan left to right; move the smallest value to the front.

Titration curve

pH rises as base is added

The equivalence point is near the steep part of the curve.

Supply and demand

Price / Quantity

Demand slopes down while supply slopes up; their crossing is equilibrium.

Cell diagram

Nucleus | membrane | mitochondria

The cell membrane surrounds the organelles shown inside.

Timeline

1900 1950 2000 2050

Events are arranged from earlier years on the left to later years on the right.

Circuit

Battery -> resistor -> LED

A closed loop carries current from the battery through the resistor and LED.

Normal distribution

Mean at center; tails at both ends

Most values cluster near the center of the bell-shaped curve.

Map

North | river | three towns

A north arrow, a river, and three labeled towns appear on the map.
